152. Maximum Product Subarray

Medium [Topics](#) [YouTube](#)

Given an integer array `nums`, find a [subarray](#) that has the largest product, and return *the product*.

The test cases are generated so that the answer will fit in a **32-bit** integer.

Note that the product of an array with a single element is the value of that element.

Example 1:

Input: `nums = [2,3,-2,4]`

Output: 6

Explanation: `[2,3]` has the largest product 6.

Example 2:

Input: `nums = [-2,0,-1]`

Output: 0

Explanation: The result cannot be 2, because `[-2,-1]` is not a subarray.

Constraints:

- $1 \leq \text{nums.length} \leq 2 * 10^4$
- $-10 \leq \text{nums}[i] \leq 10$
- The product of any subarray of `nums` is **guaranteed** to fit in a **32-bit** integer.
